

Énergie NB Power

Wood Pellet Association of Canada

September 2025

Who We Are

We're New Brunswick's power company and our utility touches every aspect of life in New Brunswick.

We have over 2,900 employees working and living in communities across the entire province.

We generate electricity at 13 facilities in the province and deliver it to over 400,000 people and businesses in our communities.

Belledune Clean Fuel Project

- Finding an alternative fuel source for Belledune is part of our strategy to drive New Brunswick to a cleaner, greener future.
- With electrification and population growth, we need Belledune's baseload to ensure energy security for our customers.
- Belledune is a reliable asset to NB Power's generating fleet, providing 450 MW of dispatchable energy and capacity.
- Belledune's primary fuel is coal and advanced wood pellets (biomass) are considered the best alternative.
- A switch to advanced wood pellets could fuel economic development and support our forestry, trucking, rail and shipping industries.
- Converting to a renewable fuel source will make Belledune our largest renewable generator; currently it is our most greenhouse-gas intensive energy generator in our fleet.
